

Cyberbike™ Cycling Sports

January 2010: Cyberbike, the fitness bike will be available at ARGOS.

Discover the very first video game that comes with an exercise bike—have fun while pedalling! Cyberbike introduces a brand new way to do sports in your living room.

The game invites you use your eco-citizen's head and legs to clean up the plant "Cyclo": clear paths and roads of the sources of pollution that are ruining the planet as you cycle along on some of the most improbable vehicles ever imagined—on land sea and air. Use the bike that comes with the game to ride through 18 different circuits. As you progress, you unlock numerous accessories to customise your vehicles and equipment, like new backpacks and new vehicle colours.

There's something for all the family with three game modes: Fitness, Story, and Multiplayer (up to four players taking turns).

An Original Accessory: the exercise bike that comes with the game is a genuine innovation. It is simple to connect it to your Nintendo Wii and can be used by all the family thanks to the adjustable saddle and handlebars.

Cycle along on some of the most improbable vehicles ever imagined: cyclocopter, cyclo-submarine or even cyclorail.

The steering wheel of the bike revolves on its axis and is also a Gamecube controller.

The bike can thus be used for other videogames which use the Acceleration/Brake functions as set up with Cyberbike. A switch button has also been added in order to completely switch from the bike function (using the pedals to accelerate) to a regular Game-

Cube controller.

Cyberbike will be available in the United Kingdom via ARGOS in January 2010. The new year will start very well with this exciting new home training product.

ABOUT EKO

Eko Software is a company established in 1999 which produces and develops console video games. It develops its own creations, which are currently distributed throughout the world.

Eko Software also develops high-quality video games on behalf of its clients, via franchises which are awarded to it.
